

Implementation-of-Linear-Regression-for-Predicting-Car-Prices

AIM:

To write a program to predict car prices using a linear regression model and test the assumptions for linear regression.

Equipments Required:

1. Hardware – PCs
2. Anaconda – Python 3.7 Installation / Jupyter notebook

Algorithm

- 1.
- 2.
- 3.
- 4.

Program:

```
/*  
    Program to implement linear regression model for predicting car prices and test  
    assumptions.  
    Developed by:  
    RegisterNumber:  
*/
```

Output:

 [simple linear regression model for predicting the marks scored](#)

Result:

Thus, the program to implement a linear regression model for predicting car prices is written and verified using Python programming, along with the testing of key assumptions for linear regression.
